

Our Recommended Vaccination Protocol

(we recommend this protocol for up to 3 years of age)

- **11-12 weeks of age Dappv 5-way** (only shots to be given that day, then every 2-4 weeks after until full series is completed including what was given at Breeders Location)
- **10-12 weeks of age Monthly Heartworm & Flea & Tick medication should be started** (not recommended to both the same day)
- **16 weeks of age Rabies should be given** (may differ by state laws on age, this is the only shot to be given that day)
- **Lepto, Corona, Lymes at 8 months** (this is an optional vaccination and only recommended if the disease is high in your area. This should be researched and carefully thought through as these vaccines can be known to do more long term damage with your puppy/dog then actually helping. DO NOT GIVE THEM IN A COMBO SHOT EVER, YOUR VETERINARIAN CAN ORDER THESE INDIVIDUAL DO NOT LET THEM TELL YOU OTHERWISE.
- **Bordetella booster** is only needed when boarding your grooming your puppy/dog
- **1 year** from the very last Dappv shot you will do another one, then every 3 years after that you can do one.

This is our recommended vaccination protocol only, please do your own research and talk with your veterinarian. You can research combo shots, core and uncommon core vaccinations and their long term effects.
